

Amendments to the Claims

Please cancel claim 21, amend Claims 22, 31, 39, 40, 57, 60 and 61, and add  
5 new claims 62 and 63 as set out below.

1. (Previously amended) A thickened oil cosmetic composition which comprises
- (1) an oil, and
- (2) uniformly dispersed in the oil as a crystallized solid, a side chain  
10 crystalline (SCC) polymer which has a crystalline melting point  $T_p$  and  
which
- (a) is substantially free of fluorine atoms, carboxylic acid groups,  
carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt  
groups, amido groups, pyrrolidino groups and imidazole groups;  
15 and
- (b) is present in amount such that it thickens the oil;
- EJ the composition being at a temperature
- (i) which is below  $T_p$ , and
- (ii) at which the composition, in the absence of the polymer, is liquid.  
20
2. (Previously amended) A composition according to Claim 1, which is at a  
temperature  $T_s$ , where  $T_s$  is from 15 to 25 °C, and wherein the SCC polymer has a  
crystalline melting point,  $T_p$ , which is 10 to 30 °C above  $T_s$ .
- 25 3. (Original) A composition according to Claim 2 wherein  $T_p$  is 40 to 50 °C.
4. (Original) A composition according to Claim 2 wherein  $T_p$  is 43 to 48 °C.
5. (Original) A composition according to Claim 3 wherein the SCC polymer has a heat  
30 of fusion of at least 20 J/g, and an onset-of-melting point  $T_o$  such that  $T_p-T_o$  is less than  
10 °C.

6. (Previously amended) A thickened oil composition which comprises

- (1) an oil, and
- (2) uniformly dispersed in the oil as a crystallized solid, a side chain crystalline (SCC) polymer which
  - (a) is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups; and
  - (b) contains 10-30% by weight of repeating units containing hydroxyl groups.

EJ 7. (Previously amended) A thickened oil composition which comprises

- (1) an oil, and
- (2) uniformly dispersed in the oil as a crystallized solid, a side chain crystalline (SCC) polymer which
  - (a) has a crystalline melting point,  $T_p$ , of 40-50 °C.;
  - (b) consists essentially of
    - (i) 70-99% by weight of repeating units derived from at least one n-alkyl acrylate or methacrylate ester in which the n-alkyl group contains 16 to 22 carbon atoms,
    - (ii) 1-30% by weight of repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyl-substituted alkyl group containing less than 12 carbon atoms, and
    - (iii) 0-30% by weight of repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains an unsubstituted alkyl group containing less than 16 carbon atoms.

20 25 30 8. (Canceled)

9. (Previously amended) A thickened oil cosmetic composition which comprises

- (1) an oil, and
- (2) dispersed in the oil, a polymer which
  - (a) has a crystalline melting point,  $T_p$ , and an onset of melting temperature,  $T_o$ , such that  $T_p - T_o$  is less than  $T_p^{0.7}$ ;
  - (b) is soluble in the oil at temperatures above  $T_p$ ,
  - (c) has been dispersed in the oil by a process which comprises
    - (i) dissolving the polymer in the oil at a temperature above  $T_p$ , and
    - (ii) cooling the solution to crystallize the polymer in the oil,
  - (d) is a side chain crystalline (SCC) polymer which is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups;
  - (e) is present in amount such that it thickens the oil;

the composition being at a temperature  $T_s$

- (i) which is below  $T_p$ , and
- (ii) at which the composition, in the absence of the polymer, is liquid.

10. (Original) A composition according to Claim 9 wherein  $T_s$  is from 15 to 25 °C and  $T_p$  is 10 to 30 °C above  $T_s$ .

11. (Original) A composition according to Claim 9 wherein  $T_p$  is 40 to 50 °C.

25 12. (Original) A composition according to Claim 9 wherein the SCC polymer has a heat of fusion of the least 20 J/g, and an onset-of-melting point  $T_o$  such that  $T_p - T_o$  is less than 10 °C.

30 13. (Previously amended) A thickened oil composition which comprises

- (1) an oil, and

- (2) uniformly dispersed in the oil as a crystallized solid, an SCC polymer which
- (a) consists essentially of
- (i) 70-99% by weight of repeating units derived from at least one n-alkyl acrylate or methacrylate ester in which the n-alkyl group contains 16 to 22 carbon atoms,
- (ii) 1-30% by weight of repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyl-substituted alkyl group containing less than 12 carbon atoms, and
- (iii) 0-29% by weight of repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains an unsubstituted alkyl group containing less than 16 carbon atoms; and
- (b) is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups.

14. (Original) A composition according to Claim 13 wherein the SCC polymer contains  
20 10-30% by weight of the repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyl-substituted alkyl group containing less than 12 carbon atoms.

15. (Original) A thickened oil composition which is at a temperature  $T_s$  of 15 to 25  
25 °C, and which comprises

(1) an oil, and

(2) a side chain crystalline (SCC) polymer which

(a) is uniformly dispersed in the oil as a crystallized solid

(b) has a crystalline melting point,  $T_p$ , of 43 to 48 °C, and

(c) consists essentially of

5

10

EJ  
16. (Original) A composition according to Claim 15 wherein the SCC polymer contains 15-25 % by weight of the repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyl-substituted alkyl group.

15

17. (Original) A composition according to Claim 15 wherein the SCC polymer consists essentially of several

20

(i) 70-99% by weight of the repeating units derived from at least one n-alkyl acrylate or methacrylate ester in which the n-alkyl group contains 16 to 22 carbon atoms, and  
(ii) 1-30% by weight of the repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyethyl, hydroxypropyl, or hydroxybutyl group.

25

18. (Original) A composition according to Claim 17 wherein the SCC polymer contains 15-25 % by weight of the repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains a hydroxyl-substituted alkyl group.

30

19. (Original) A composition according to Claim 15 which contains less than 1% by weight of surface active agents, based on weight of the oil.

20. (Previously amended) A method of making a thickened oil cosmetic composition comprising an oil and, dispersed in the oil, a side chain crystalline (SCC) polymer which

(a) has a crystalline melting point,  $T_p$ , and an onset of melting temperature,  $T_o$ , such that  $T_p - T_o$  is less than  $T_p^{0.7}$ , and

5 (b) is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups;

the method comprising

(i) dissolving the SCC polymer in the oil at a temperature above  $T_p$ , and

10 (ii) cooling the solution to crystallize the polymer in the oil;

the amount of the SCC polymer being such that, after step (ii), it thickens the oil, and the temperature at the end of step (ii) being a temperature which is below  $T_p$ , and at which the composition, in the absence of the polymer, is liquid.

15 21. (Canceled)

22. (Currently amended) A composition according to Claim 21 57 which is at a temperature  $T_s$ , where  $T_s$  is from 15 to 25 °C, and wherein the SCC polymer has a crystalline melting point,  $T_p$ , which is 10 to 30 °C above  $T_s$ .

20

23. (Previously added) A composition according to Claim 22 wherein  $T_p$  is 40 to 50 °C.

24. (Previously added) A composition according to Claim 22 wherein  $T_p$  is 43 to 48

25 °C.

25. (Previously added) A composition according to Claim 23 wherein the SCC polymer has a heat of fusion of least 20 J/g and an onset-of-melting point  $T_o$  such that  $T_p - T_o$  is less than 10 °C.

30

26. (Previously added) A composition which is a water-in-oil emulsion or an oil-in-water emulsion and which comprises

- (1) water,
- (2) an oil, and

5 (3) uniformly dispersed in the oil as a crystallized solid, a side chain crystalline (SCC) polymer which is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups.

10  
27. (Previously added)

A composition according to Claim 26, which is at a temperature  $T_s$ , where  $T_s$  is from 15 to 25 °C, and wherein the SCC polymer has a crystalline melting point,  $T_p$ , which is 10 to 30 °C above  $T_s$ .

15 28. (Previously added) A composition according to Claim 26 wherein  $T_p$  is 40 to 50 °C.

20 29. (Previously added) A composition according to Claim 26 which is an oil-in-water emulsion and which contains less than 1% by weight of surface active agents, based on the weight of the oil.

25 30. (Previously added) A thickened oil composition according to Claim 26 wherein the SCC polymer has a heat of fusion of at least 20 J/g, and an onset-of-melting point  $T_o$  such that  $T_p-T_o$  is less than 10 °C.

31. (Currently amended) A composition according to Claim 26 which contains 0.5 to 5% ~~at least 0.5%~~ by weight of the SCC polymer, based on weight of the composition.

32. (Previously amended) A thickened oil composition which comprises

30 (1) an oil selected from selected from the group consisting of hydrogenated polyisobutylene; triglycerides; purcellin oil; isopropyl myristate; butyl myristate;

cetyl myristate; isopropyl palmitate; butyl palmitate; ethyl-2-hexyl palmitate; isopropyl stearate; butyl stearate; octyl hexadecyl stearate; isooctyl stearate; decyl oleate; hexyl laurate; propylene glycol dicaprylate, diisopropyl adipate; animal oils; silicone oils; oleyl alcohol; linoleyl alcohol; linolenyl alcohol; isostearyl alcohol; octyl dodecanol; esters derived from lanolic acid; and acetyl glycerides; and

(2) uniformly dispersed in the oil as a crystallized solid, a side chain crystalline (SCC) polymer which is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups.

33. (Previously added) A composition according to Claim 32, which is at a temperature  $T_s$ , where  $T_s$  is from 15 to 25 °C, and wherein the SCC polymer has a crystalline melting point,  $T_p$ , which is 10 to 30 °C above  $T_s$ .

34. (Previously added) A composition according to Claim 32 wherein  $T_p$  is 40 to 50 °C.

35. (Previously added) A composition according to Claim 32 wherein  $T_p$  is 43 to 48 °C.

36. (Previously added) A composition according to Claim 32 wherein the SCC polymer has a heat of fusion of at least 20 J/g, and an onset-of-melting point  $T_o$  such that  $T_p-T_o$  is less than 10 °C.

37. (Previously added) A composition according to Claim 1 wherein each of the following conditions is fulfilled by the SCC polymer:

(1) at most 1% of the carbon atoms are substituted by one or more fluorine atoms;

(2) at most 0.2 mol% of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;

- (3) at most 0.5% by weight of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
- (4) the polymer has an acidity of less than 0.07 meq/g;
- 5 (5) at most 1 mol% of the repeating units are derived from acrylamide
- (6) at most 0.2 mol% of the repeating units are derived from  
N-vinylpyrrolidone;
- (7) at most 0.2 mol% of the repeating units are derived from N-vinylimidazole.

38. (Previously added) A composition according to Claim 1 wherein each of the  
10 following conditions is fulfilled by the SCC polymer:

- 15 (1) none of the carbon atoms are substituted by one or more fluorine atoms;
- (2) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
- (3) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
- (4) the polymer has an acidity of less than 0.07 meq/g;
- (5) none of the repeating units are derived from acrylamide;
- (6) none of the repeating units are derived from N-vinylpyrrolidone;
- (7) none of the repeating units are derived from N-vinylimidazole.

20 39. (Currently amended) A composition according to Claim 21 57 wherein each of the following conditions is fulfilled by the SCC polymer:

- 25 (1) at most 1% of the carbon atoms are substituted by one or more fluorine atoms;
- (2) at most 0.2 mol% of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
- (3) at most 0.5% by weight of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
- (4) the polymer has an acidity of less than 0.07 meq/g;
- 30 (5) at most 1 mol% of the repeating units are derived from acrylamide
- (7) at most 0.2 mol% of the repeating units are derived from

N-vinylpyrrolidone;

- (7) at most 0.2 mol% of the repeating units are derived from N-vinylimidazole.

40. (Currently amended) A composition according to Claim 21 57 wherein each of the

5 following conditions is fulfilled by the SCC polymer:

- (1) none of the carbon atoms are substituted by one or more fluorine atoms;  
(2) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;  
(3) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;  
10 (4) the polymer has an acidity of less than 0.07 meq/g;  
(5) none of the repeating units are derived from acrylamide;  
(6) none of the repeating units are derived from N-vinylpyrrolidone;  
(8) none of the repeating units are derived from N-vinylimidazole.

15

41. (Previously added) A composition according to Claim 26 wherein each of the

following conditions is fulfilled by the SCC polymer:

- (1) at most 1% of the carbon atoms are substituted by one or more fluorine atoms;  
20 (2) at most 0.2 mol% of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;  
(3) at most 0.5% by weight of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;  
(4) the polymer has an acidity of less than 0.07 meq/g;  
25 (5) at most 1 mol% of the repeating units are derived from acrylamide  
(9) at most 0.2 mol% of the repeating units are derived from N-vinylpyrrolidone;  
(7) at most 0.2 mol% of the repeating units are derived from N-vinylimidazole.

30 42. (Previously added) A composition according to Claim 26 wherein each of the

following conditions is fulfilled by the SCC polymer:

- (1) none of the carbon atoms are substituted by one or more fluorine atoms;
  - (2) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
  - (3) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;
  - (4) the polymer has an acidity of less than 0.07 meq/g;
  - (5) none of the repeating units are derived from acrylamide;
  - (6) none of the repeating units are derived from N-vinylpyrrolidone;
  - (7) none of the repeating units are derived from N-vinylimidazole.

10

43. (Previously added) A composition according to Claim 32 wherein each of the following conditions is fulfilled by the SCC polymer:

(1) at most 1% of the carbon atoms are substituted by one or more fluorine atoms;

15

(2) at most 0.2 mol% of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;

(3) at most 0.5% by weight of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;

20

(5) at most 1 mol% of the repeating units are derived from acrylamide  
(10) at most 0.2 mol% of the repeating units are derived from  
N-vinylpyrrolidone;

(7) at most 0.2 mol% of the repeating units are derived from N-vinylimidazole.

25

44. (Previously added) A composition according to Claim 32 wherein each of the following conditions is fulfilled by the SCC polymer:

(1) none of the carbon atoms are substituted by one or more fluorine atoms;

(2) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;

30

(3) none of the repeating units contain a carboxyl group, a carboxyl salt group, a sulfonic acid group, or a sulfonic acid salt group;

- (4) the polymer has an acidity of less than 0.07 meq/g;
- (5) none of the repeating units are derived from acrylamide;
- (6) none of the repeating units are derived from N-vinylpyrrolidone;
- (7) none of the repeating units are derived from N-vinylimidazole.

5

45. (Previously added) A thickened oil composition which comprises

- (1) an oil, and
- (2) uniformly dispersed in the oil as a crystallized solid, a side chain crystalline (SCC) polymer which consists essentially of
- (i) 70-99% by weight of repeating units derived from at least one n-alkyl acrylate or methacrylate ester in which the n-alkyl group contains 16 to 50 carbon atoms,
- (ii) 1-30% by weight of repeating units derived from hydroxyethyl acrylate, and
- (iii) 0-29% by weight of repeating units derived from at least one acrylate or methacrylate ester in which the ester group contains an unsubstituted alkyl group containing less than 16 carbon atoms.

46. (Previously added) A composition according to Claim 45 wherein the SCC

20 polymer contains 15-25% by weight of the repeating units derived from hydroxyethyl acrylate.

47. (Previously added) A thickened oil composition which is free of water and which comprises

- 25 (1) an oil, and
- (2) uniformly dispersed in the oil as a crystallized solid, 2 to 10% by weight, based on the weight of the oil, of a side chain crystalline (SCC) polymer which is substantially free of fluorine atoms, carboxylic acid groups, carboxylic acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups, pyrrolidino groups and imidazole groups.

48. (Previously added) A composition according to Claim 47, which is at a temperature  $T_s$ , where  $T_s$  is from 15 to 25 °C, and wherein the SCC polymer has a crystalline melting point,  $T_p$ , which is 10 to 30 °C above  $T_s$ .
- 5 49. (Previously added) A composition according to Claim 48 wherein  $T_p$  is 40 to 50 °C.
50. (Previously added) A composition according to Claim 49 wherein  $T_p$  is 43 to 48 °C.
- 10
51. (Previously added) A composition according to Claim 49 wherein the SCC polymer has a heat of fusion of at least 20 J/g, and an onset-of-melting point  $T_o$  such that  $T_p-T_o$  is less than 10 °C.
- 15 52. (Previously added) A composition according to Claim 1 which is free of water and which contains 2 to 7%, by weight, based on the weight of the oil, of the SCC polymer.
53. (Previously added) A composition according to Claim 1 which is a water-in-oil emulsion and which contains 0.5 to 5% by weight of the SCC polymer.
- 20
54. (Previously added) A composition according to Claim 9 which is free of water and which contains 2 to 7%, by weight, based on the weight of the oil, of the SCC polymer.
- 25
55. (Previously added) A composition according to Claim 9 which is a water-in-oil emulsion and which contains 0.5 to 5% by weight of the SCC polymer.
56. (Previously added) A method according to Claim 20 wherein the thickened oil composition is free of water and the amount of the SCC polymer is such that, after step
- 30

(ii), the composition contains 2 to 7%, by weight, based on the weight of the oil, of the SCC polymer.

57. (Currently amended) A composition according to Claim 21 which contains A thickened oil composition which is free of water and which comprises

5        (1) an oil, and  
          (2) uniformly dispersed in the oil as a crystallized solid 2 to 7%, by weight,  
          based on the weight of the oil, of the SCC polymer a side chain crystalline (SCC)  
          polymer which is substantially free of fluorine atoms, carboxylic acid groups, carboxylic  
10      acid salt groups, sulfonic acid groups, sulfonic acid salt groups, amido groups,  
          pyrrolidino groups and imidazole groups.

15      58. (Previously added) A composition according to Claim 26 which contains 0.5 to 5% by weight of the SCC polymer.

59. (Previously added) A composition according to Claim 20 wherein the oil is a vegetable oil.

60. (Currently amended) A composition according to Claim 20 wherein the oil is  
20 selected from the group consisting of sunflower seed oil, sesame seed oil, rape seed oil,  
sweet almond oil ; calphyllum oil, palm oil, avocado oil, jojoba oil, olive oil, castor oil,  
and grain germ oils.

61 66. (Currently amended) A composition according to Claim 20 wherein the oil is  
25 selected from perhydrosqualene, dimethyl polysiloxane, phenyl dimethicones, isopropyl  
lanolate, isocetyl lanolate, octanoates of glycol, octanoates of glycerol, decanoates of  
glycol, decanoates of glycerol, and cetyl ricinoleate.

62. (New) A composition according to Claim 1 wherein the SCC polymer is present  
30 in amount about 0.1 to about 12% by weight, based on the weight of the oil.

63. (New) A method according to Claim 20 wherein the SCC polymer, at the end of step (ii), is present in amount about 0.1 to about 12% by weight, based on the weight of the oil.
